## Our quality products

Optimally designed for the most demanding requirements

- Steinbach AG is your professional partner for the purchase and production of high quality silicone and natural rubber membranes.

Providing a wide range of applications

We have the necessary know-how and the appropriate production sites at our disposal to manufacture even oversize membranes.

Steinbach membranes allow pressing of diverse materials, e.g. foils, veneers, solid surface materials, glass lamination, car interiors, solar modules, leather, etc.

Steinbach AG stands for a broad portfolio of materials, state-of-the-art production possibilities, shortest lead times with exceptional quality and high delivery performance as well as customer-driven service.

## Silicone

Ideal for a variety of applications

- Our silicone products are distinguished by a particularly high degree of elasticity.

Their consistent quality has proven itself in the operating process thanks to permanent flexibility and high temperature resistance.

## Natural rubber

Perfectly tailored

- Our products are based on high-quality natural rubber of exceptional durability and flexibility.

Carefully selected ingredients prevent discolouration on formed plastics – a Steinbach formula based on many years of experience.

Just as easily we manufacture to your own specifications.
